In-booth access to audiometric tools

Skip the external monitor

Screen Mirror lets audiologists view and interact with audiometric data directly inside the booth.

- Review completed audiograms with patients inside the booth.
- View a video otoscope directly on a Flex VRA monitor.
- Support counseling with on-screen annotation, drawings, and visuals.
- Control audiometric software during testing with a wireless keyboard.

Reduce room exits, improve counseling flow, and keep the patient engaged.
