

VISUAL REINFORCEMENT OPERANT CONDITIONING AUDIOMETRY

Better engagement. Better results.

The Flex VROCA button lets the child respond on their own: one press triggers visual reinforcement on the Flex VRA monitor. It is wireless and battery-free, so you can test anytime and anywhere without added setup.

With no cables to distract them, children respond naturally without shifting posture or attention. Built-in compatibility with Flex VRA gives you precise control over the reinforcer.

Designed to support more consistent responses and greater confidence in behavioral test results.

Designed for fast, reliable clinical use

- ✓ Wireless and battery-free; each press powers the signal
- ✓ Plug-in USB receiver for Flex VRA video systems
- ✓ Suppress the button until the child is ready
- ✓ Includes button, USB receiver and instruction guide
- ✓ 1-year warranty

FLEX-BUTTON
