VRA FOR ANY AGE

The perfect pair.

Flex VRA combination systems let you test a wider age range from a single remote control. For younger patients (6 months to 1 year), Flex Toy provides engaging visual reinforcement. For older patients, Flex Video monitors deliver age-appropriate content. Switch between them on any patient to keep engagement high and test times short.

Flex Video
Older children

Flex Toy
6 months to 1 year

LEFT CENTER RIGHT

One system. One remote. No added complexity.

6
reinforcers on a single remote

Toy or video
at every position you choose

Any patient
switch mid-test in one press

Configurations

Top row video, bottom row toy No reinforcer
