

FLEXI HALO™

Works Like Magic

Say hello to Halo. The only transparent screen VRA that provides engaging videos and ever-changing lifelike toys that spin in mid-air.

It's video VRA.
It's toy VRA.
All in one box.

Why Halo?

Getting a complete hearing evaluation in pediatrics depends on one thing: keeping them engaged long enough to respond consistently.

Traditional toy VRA loses novelty fast. Video VRA keeps attention but lacks the physical presence that younger children respond to best.

Halo solves both problems in one box. A transparent display delivers high-contrast videos and lifelike toys in one reinforcer.

It's like nothing pediatric patients have ever seen before.
And that's the point.

Specifications

Display	13.3" Transparent LCD
