TRANSPARENT DISPLAY VRA

Works like magic.

Say hello to Halo: the only transparent screen VRA that provides engaging videos and ever-changing lifelike toys that spin in mid-air.

It's video VRA.

It's toy VRA.

All in one box.

Why Halo?

**Now the choice is clear.
Literally.**

For years, pediatric audiologists had to choose. Toy? Video? Both?

Traditional toy VRA loses novelty fast. Video VRA keeps attention but lacks the physical presence that younger children respond to best.

Halo solves both problems in one box. A transparent display delivers high-contrast videos and lifelike toys in one reinforcer.

It's like nothing pediatric patients have ever seen before. And that's the point.

Specifications

Display	13.3" transparent LCD
Remote transmission	Zoned radio frequency
Activation latency	0.25 seconds (instantaneous)
Remote battery life	1.5 years (2× AAA)
Power	Input: 100–240 V 50/60 Hz, 1.5 A max · Output: +12 V, 5 A, 60 W
Dimensions	14 in (L) × 4 in (W) × 9.5 in (H)
Warranty	1 year
